Narvi Flow

Controller for electric sauna heaters

MAXIMUM
RELAXATION

Narvi Flow Wifi – Feel the control

Perfect steam is the sum of many elements. Narvi Flow gives you even more precise control over your sauna heater and your overall sauna experience, so that every sauna session can be a moment of relaxation for you.

The designed controller suits various sauna and bathroom interiors. Its brilliant, simple usability ensures smooth use even with wet fingers or dim spaces. You can also control the heater remotely via the app. In addition to the heater, Flow allows you to adjust the sauna lighting and ventilation.

EVERYTHING FOR PERFECT RELAXATION

Flow Wifi is the ideal companion for Narvi electric sauna heaters. From the Flow controller interface, you can start the heater, adjust the sauna room temperature, schedule the heating start time and duration. All of this, also remotely.

Narvi Flow Wifi enables remote control when used together with a safety device. Together with the controller and the Narvi Flow app, you can switch on the sauna from anywhere, at any time. A door switch is included as a safety device.

Narvi Flow Wifi is included as standard with heaters equipped with an external controller. These heaters are sold under new, separate product codes.

Intuitive design

A controller with beautifully simple Narvi design. Flow stands out with its appealing minimalist appearance, designed for the easiest possible usability and compatibility with various sauna spaces, interiors, and styles. Navigation in the controller menus is smooth with three buttons, and the physical buttons provide comfort feel and reliability during use.

During the sauna session, the controller displays the sauna temperature, the active function, and the remaining time of the heater's timer. You will also see the humidity level if a optional humidity sensor is connected to the system.

Suitable for all saunas

In addition to home saunas, Narvi Flow Wifi is ideal for community sauna facilities.

The controller's Easy Mode and On/Off-Mode can be used to restrict the available functions for the user. In On/Off-Mode, the user only needs to switch the sauna on, and the heater will operate according to preset settings.

Both features are excellent also for short-term rental properties and hotel use. The safe and easy operating modes also work well for families with children.

On/Off-Mode

- In On/Off-Mode, the user only turns the heater on and off, using preconfigured settings.

Easy Mode

- In Easy Mode, the user adjusts the operating time and temperature but cannot change system default values.

Heat your sauna remotely

Turn on the sauna with a single press – from anywhere, anytime. Together with the app, Narvi Flow Wifi offers remote control of your sauna heater. Open the app on your mobile device, start the sauna immediately or with timing – and perfect steam will be waiting when you arrive.

Remote control is enabled via the free Narvi Flow app, available in the App Store and Google Play.

Easy installation and setup

Installing and connecting the Narvi Flow Wifi controller requires electrical wiring, which must be performed by a certified electrician.

The controller can be installed either inside the sauna room or outside it.

- In Narvi standard electrical heater models, the power unit of the controller is integrated into the heater. The Flow Wifi controller can also be purchased separately and connected to emodel electric heaters.

- The system always includes a temperature sensor and an overheating protection sensor. A humidity sensor, safety switch, door switch, and lighting (max. 100W) can also be connected to the system.
- A door switch is always included with the Wifi controller.
- The controller is protected against splashing water (IPX5).

How does the sauna heater controller work?

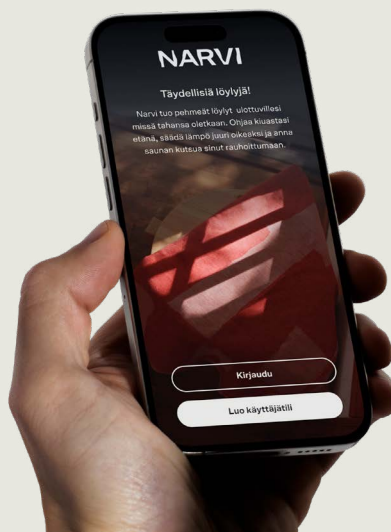

The delivery includes the Narvi Flow Wifi control unit, temperature and overheating protection sensor, and the power unit integrated into the heater. The controller is also available as a separate unit (<11,0 kW and 11,0-18 kW), and can be connected with electrical heaters without control (e-models).

You can install the controller wherever you prefer – inside the sauna or nearby. The temperature sensor is installed above the heater, either on the wall or the ceiling.

Physical buttons and the understated design ensure reliability and elegance in any environment.

With Narvi Flow Wifi and the Narvi Flow app, you can start the sauna remotely as well. Perfect steam will be ready exactly when you want it.

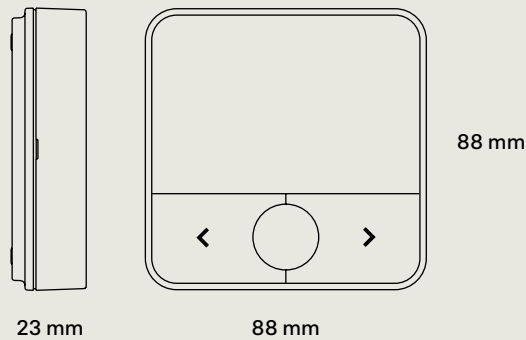

NARVI FLOW

TECHNICAL SPECIFICATIONS

Narvi Flow Wifi is standard in following heaters (max. 11.0 kW):

Narvi Saana, Narvi NC Electric,
Narvi Smooth, Narvi Velvet Electric,
Narvi Ultra Small

Narvi Flow Wifi Controller package <11,0 kW

Product code: 4242W

**Narvi Flow Wifi Power Extension Unit package
11,0-18,00 kW**

Product code: 4248W

Optional accessories:

- Controller extension cable 10 m
- Controller extension cable 20 m
- Humidity sensor (cable 6 m)
